

Cambium Networks

Position: DevOps Engineer

Location: UK/Remote

Department Description:

The Cambium DevOps group is responsible for the safe, reliable, and available running of Cambium's cloud apps and infrastructure. The team is distributed across the time zones and work closely with the engineering teams to improve availability.

Scope of Responsibilities/Expectations

Cambium Networks is looking for a Site Reliability Engineer to help maintain its mission-critical Cloud services infrastructure. The system runs in AWS and services thousands of customers around the world with 99.99% uptime SLA. The desired candidate will take the lead in the development of the "Infrastructure as Code" system, infrastructure cost optimization, and the system monitoring and troubleshooting.

Specific Knowledge/Skills

- Strong experience with at least one DevOps tool (Chef, Puppet, Terraform, Salt, Ansible).
- Ability to write scripts using shell and higher-level languages (such as Python or Ruby)
- Experience in working with source code control tools (git)
- "Infrastructure as Code" mentality and Continuous Integration strategies
- Experience in Automating DevOps infrastructure
- Some Java experience preferred.
- Experience with mission-critical, 99.99% available systems preferred.
