Introduction

This Quick Start Guide assists you to quickly connect and configure Cambium cnPilot r190. To learn more about Cambium cnPilot Home & Small Business Wireless Router and for detailed configuration information, see Cambium cnPilot Home & Small Business Wireless Router User Guide.

Powering Up

Power ON the wireless router using the power supply.
- POWER LED will glow after 5 seconds of powering ON and wait for 2 minutes to boot up the device properly.
- Connect an Ethernet cable from your computer to any RJ45 LAN port on cnPilot r190.
- LAN LED will turn ON after connecting the LAN cable.
- Connect the WAN port of the wireless router to the ISP device (E.g. ADSL, Cable Modem). The WAN LED will start glowing now.

Configure PC

Configure the LAN interface of your PC to acquire the IP address using DHCP.

Quick Link Setup

IP Address Configuration

Select these options Use the following IP address and Use the following DNS server addresses to obtain IP address and DNS server addresses automatically.

note

- The default WAN IP Mode is DHCP. Please refer your ISP’s instructions to use other modes if required, as shown below.

Quick Link Setup

- Connect to the wireless router by typing http://192.168.11.1 in web browser.
- Enter the default username as admin and password as admin.
- Change the default password by navigating to Administration > Management > Password Reset option.

Quick Link Setup

- Navigate to the wireless tab and change the SSID name.
- For selecting the security password for SSID, navigate to Wireless > Wireless Security and select the SSID from SSID drop-down list, and select the security type and password.

Quick Link Setup

- To view the connection status:
  - Login to http://192.168.11.1
  - Navigate to STATUS tab and check the Network Status for details of internet connectivity and statistics.
